

Consumer Survey

2015, April

Consumers' expectations concerning their own economy on the rise

Consumers' confidence in the economy remained unchanged in April. The consumer confidence indicator stood at 11.4 in April, having been 11.2 in March and 10.6 in February. Last year in April, the consumer confidence indicator received the value 3.7. The long-term average for the confidence indicator is 11.8. The data are based on Statistics Finland's Consumer Survey, for which 1,310 people resident in Finland were interviewed between 1 and 17 April.

Consumer confidence indicator (CCI)

1) average 10/1995 - 04/2015

Of the four components of the consumer confidence indicator, expectations on own and Finland's economy and of unemployment improved slightly in April compared with March. By contrast, assessments concerning household's saving possibilities weakened but remained, nevertheless, bright. Consumers' expectations on their own economy have improved evenly since October 2014. In April, the expectations were at their highest since May 2011.

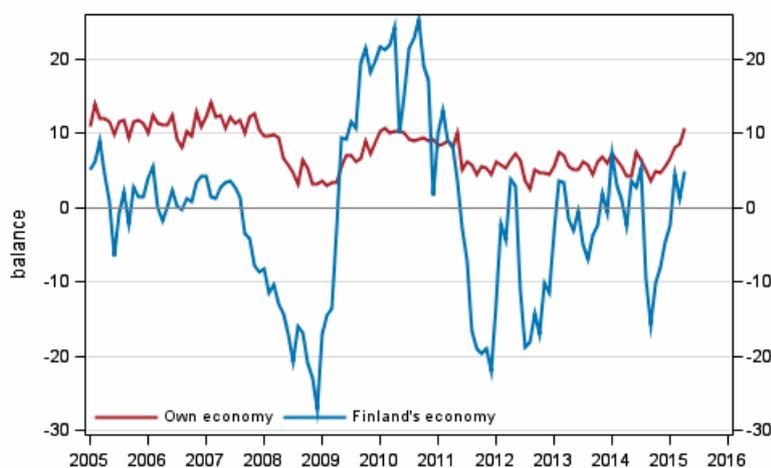

In April, consumers regarded the time more favourable for raising a loan than for buying durable goods or, in particular, saving. In April, employed consumers felt personally somewhat less threatened by unemployment than in March.

Consumers' own and Finland's economy

In April, 33 per cent of consumers believed that Finland's economic situation would improve in the coming twelve months, while 21 per cent of them thought that the country's economy would deteriorate. The corresponding proportions were 30 and 25 per cent in March and 28 and 30 per cent one year ago in April.

In all, 28 per cent of consumers believed in April that their own economy would improve, while 11 per cent of them feared it would worsen over the year. Twelve months earlier the corresponding proportions were 22 and 15 per cent.

Consumers' expectations concerning their own and Finland's economy in 12 months' time

Unemployment and inflation

Altogether, 42 per cent of consumers thought in April that unemployment would increase over the year, and 20 per cent of them believed it would decrease. The corresponding proportions were 47 and 17 per cent in March and 58 and 12 per cent one year ago.

Twenty per cent of employed persons reckoned in April that their personal threat of unemployment had grown over the past few months and 14 per cent thought it had lessened. Forty-six per cent of employed persons thought the threat had remained unchanged and 19 per cent felt that they were not threatened by unemployment at all.

Consumers predicted in April that consumer prices would go up by 1.2 per cent over the next 12 months. In April 2014, the predicted inflation rate was 2.4 per cent, and its long-term average is 2.2 per cent.

Buying of durable goods

In April, 47 per cent of consumers thought the time was favourable for buying durable goods. Fifteen per cent of households were fairly or very certain to buy a car and seven per cent a dwelling during the next 12 months. Twenty-three per cent of households were planning to spend money on renovating their dwelling within a year.

Saving and taking out a loan

Altogether, 50 per cent of consumers regarded the time favourable for saving in April. In all, 64 per cent of households had been able to lay aside some money and 76 per cent believed they would be able to do so during the next 12 months.

In April, 68 per cent of consumers regarded the time good for raising a loan. Eleven per cent of households were planning to raise a loan within one year.

Consumers' views of the economy

	Average 10/1995-	Max. 10/1995-	Min. 10/1995-	04/2014	03/2015	04/2015	Outlook
A1 Consumer confidence indicator, CCI = (B2+B4+B7+D2)/4	11,8	22,9	-6,5	3,7	11,2	11,4	=
B2 Own economy in 12 months' time (balance)	8,4	14,1	2,3	4,2	8,5	10,7	+
B4 Finland's economy in 12 months' time (balance)	3,2	25,3	-27,1	-2,5	1,2	5,0	=
B6 Inflation in 12 months' time (per cent)	2,2	4,6	0,6	2,4	1,3	1,2	
B7 Unemployment in Finland in 12 months' time (balance)	-3,3	27,6	-51,1	-25,5	-16,2	-12,5	-
B8 Own threat of unemployment now (balance)	-1,0	7,6	-18,8	-9,3	-8,7	-2,8	-
C1 Favourability of time for purchasing durables (balance)	18,2	41,8	-14,2	1,9	17,2	18,6	=
C2 Favourability of time for saving (balance)	10,9	36,8	-19,6	3,7	3,3	-0,1	-
C3 Favourability of time for raising a loan (balance)	16,9	42,0	-47,1	10,6	22,2	26,1	+
D2 Household's saving possibilities in the next 12 months (balance)	39,0	52,2	10,9	38,7	51,0	42,2	+

The **balance figures** are obtained by deducting the weighted proportion of negative answers from that of positive answers. The **consumer confidence indicator** is the average of the balance figures for the CCI components. The balance figures and the confidence indicator can range between -100 and +100 – the higher (positive) balance figure, the brighter the view on the economy.

Explanations for **Outlook** column: ++ Outlook is very good, + Outlook is good, = Outlook is neutral, - Outlook is poor, -- Outlook is very poor. Deviation of balance from average has been compared to standard deviation.

The population and sample of the Survey

The population of the Consumer Survey comprises 4.4 million persons aged 15 to 84 and their 2.6 million households in Finland. The population was extended to persons aged 75 to 84 starting from January 2012. The gross size of the monthly sample of the Survey is 2,350 persons (previously 2,200 persons).

In April, the non-response rate of the Consumer Survey was 44.3 per cent. The non-response rate includes those who refused from the survey or were otherwise prevented from participating, as well as those who could not be contacted.

The extension of the population, that is, responses from persons aged 75 to 84, is estimated to have weakened the value of the consumer confidence indicator by good one unit starting from January 2012. This has primarily been caused by a drop in the balance figure of one component, namely own household's saving possibilities. The extension of the population has also somewhat affected the results on owning various home technology.

EU results

The (seasonally adjusted) Consumer Survey results for all EU countries are released on the European Commission website: European Commission, DG ECFIN, Business and Consumer Survey Results; http://ec.europa.eu/economy_finance/db_indicators/surveys/index_en.htm

1. Method of the Consumer Survey

The Consumer Survey is a telephone interview survey by means of which it is possible to measure Finns' images - assessments and expectations - of the general economic development and the financial situation of one's own household and intentions to make major purchases, save money or take out a loan. In addition, the survey is a tool for finding out how common modern machines and equipment are in households.

The first Finnish Consumer Survey was conducted in November 1987. Until 1991 it was carried out twice a year, in May and November. In 1992 the survey times were rose to four: the survey months were February, May, August and November. Since October 1995 the Consumer Survey data have been collected monthly on assignment of the European Commission.

The Consumer Survey has a totally new individual sample each month. The same sample is also used for the data collection of the Finnish Travel Survey and some other surveys as well. The sample size of the Consumer Survey is 2,350 persons monthly. The non-response rate nowadays being about 40 per cent, approximately 1,400 responses are gained every month. The non-response rate includes those who refused from the survey or were otherwise prevented from participating as well as those who could not be contacted.

The interviews are conducted from Statistics Finland's CATI Centre during the first two or three weeks of the month. The target area is the whole country and the respondents of the Consumer Survey represent the 15 to 84-year-old population in Finland, according to age, gender, province of domicile and native language.

All the response data of the Consumer Survey are weighted against the total population by means of sample weights. Weighting corrects the effects of non-response and improves the statistical accuracy of the data. The weights are established by using a calibration method and the probability of each observation to be included in the sample. The figures and series presented are not seasonally adjusted.
